

The cover page & General information

The two blocks of text that ride in front of every bundle — and how to write them yourself, without asking an admin.

Open it from **Cover page** in the sidebar (under Delivery).

This is new — it used to be admin-only

Standing instructions to suppliers (“the pictogram is handed over by the supplier”, inspection standards, contact lines) are **your** knowledge, not configuration. So you can now write them directly. Nothing on this page can change what a style generates, which languages it prints, or whether it's approved — it only changes **words on paper**.

1 What the two blocks are

Every generated bundle starts with a **cover PDF**. It carries three things, in this order — and you control the middle and the last one.

the cover PDF of any bundle

Required packaging for this order

Style 5402 · Zip hoodie · PO 100390

DOCUMENT	SIZE	STATUS
Care label	35 × 90 mm	Approved
Carton marking	105 × 74 mm	Awaiting Contrast confirmation

↑ built automatically from the style — not editable

Colour stickers are mandatory on all orders. 1

The pictogram must be handed over by the supplier.

— page 1: the cover sheet —

General Requirements and Inspection Standard

 2

Max shrinkage of garment: -2 / +5 %. Prints & heat transfer must be 100 % PVC free...

PARAMETER	VALUE
Inspection level	II

— pages 2+: General information —

- 1 The cover page block.** Same words on **every** cover, for every client. Use it for company-wide standing instructions. Keep it short — it shares page 1 with the packaging list.
- 2 General information.** Written **per client and business area**, and printed on its own pages after the cover sheet. This is where the long material goes: inspection standards, AQL tables, requirements.

Which one do I want? If it's true for every supplier we work with → **cover page**. If it only applies to one client (or one of that client's business areas) → **General information**.

2 Getting there

One page, two tabs. Everything in this guide happens here.

- 1 **Cover page** in the sidebar. If you don't see it, you're signed in with a role that can't review — ask an admin.
- 2 The two tabs. **Cover page (all clients)** is the shared block; **General information** is per client.

3 Writing the all-clients cover block

Type on the left, watch the real cover build itself on the right. There is **no Save button** — it saves as you type.

- 1 Formatting toolbar. Or type shortcuts: **# + space** for a heading, **- + space** for a bullet.
- 2 The save status — “Auto-saves as you type” → “Saving...” → “Saved · 14:02”. If it ever says something red, your last change did **not** save; fix the connection and retype it.
- 3 **Visual / Markdown**. Visual is the formatted view. Markdown shows the raw text — handy for pasting a big table.
- 4 The preview uses a **sample** style, so the packaging list is representative, not a real order. Your block is what's real. It refreshes after each save.

Keep it short. This block shares page 1 with the packaging list. Anything longer than a few lines belongs in General information.

4 Writing General information, per client

Same editor — plus a picker at the top that chooses **whose** text you're editing.

General information

Client & business area Northwind Retail · Private Label ▾

Content Saved · 14:09 General information preview

General Requirements

- Max shrinkage of garment: -2 / +5 %
- Prints & heat transfer must be 100 % PVC free

AQL

PARAMETER	VALUE
Inspection level	II

General Requirements

Max shrinkage of garment: -2 / +5 %
Prints & heat transfer must be 100 % PVC free

- 1 The picker lists every **client x business area** pair. Two hints in the list: “— empty” means that pair has no General information yet, and “(inactive)” means the spec isn’t generating right now (you can still write its text).
- 2 Real tables work here — this is where long requirements belong, since these get their own pages.
- 3 This preview is the **actual** page for the selected client, not a sample.

Switching clients is safe

Pick another pair and the editor reloads that client's text. Your previous edit is already saved — the status stamp told you so before you switched. There is no “unsaved changes” trap here.

5 Making the change reach bundles that already exist

Your edit applies to **everything generated from now on**, automatically.

Bundles already generated keep the old wording until you refresh them — that's what the panel at the bottom of each tab does.

bottom of the tab

Apply to existing bundles

Your edit already applies to everything generated from now on. This rebuilds the cover PDF of styles under **Northwind Retail · Private Label** that were generated *before* it...

Apply to existing bundles

This will rebuild **2** cover pages.

- ☒ Skip styles where every output is approved.
- ☒ Push updated covers to suppliers — up to **2** delivered styles will be re-pushed to SharePoint and re-notified on the next nightly supplier digest.

Start **Cancel**

Done · 2/2

Refreshed **2** Queued for suppliers **2** Pushed to SharePoint **2**

- 1 On the **General information** tab this is scoped to the client you're editing — usually a handful of styles. On the **Cover page** tab it's called **Regenerate cover pages** and covers the whole estate, which is **thousands**. Same button, very different size.
- 2 Nothing happens until you read this count and press **Start**. Cancel is free.

- 3 **Leave this ticked.** A fully-approved style's cover shows no status column, so rebuilding it changes nothing anyone can see — while still overwriting the file for a finished order. Untick only if you changed something that shows on **every** cover.
- 4 **This is the one that leaves the building.** Ticked, suppliers get the new cover in their SharePoint folder and a line in tonight's digest email. **Untick it** if you're fixing a typo and don't want to ping anyone — the covers still update in-app.
- 5 Live progress. You can press **Stop** mid-run; it's safe to start again later, and already-done styles aren't redone twice.

Outputs and approvals are never touched. This rebuilds the cover PDF only — no care label is re-rendered, nothing goes back for re-review, and no approval is undone.

6 Worked example — adding a standing note

“Every supplier must be told the pictogram is handed over by them.” Start to finish:

- 1 It's true for **every** client, so it's the shared block. Sidebar → **Cover page** → stay on **Cover page (all clients)**.
- 2 Click at the end of the text and type the sentence. Wait for “**Saved · ...**”.
- 3 Check the **Cover preview** on the right — your line should appear under the packaging list.
- 4 Every bundle generated from here on carries it. **You can stop here** if that's enough.
- 5 To reach orders already out: **Regenerate cover pages** → read the count → keep “**Skip ... all approved**” ticked → decide on the supplier push → **Start**.

If you're not sure about step 5

Ask before running the whole-estate sweep. It re-pushes files to suppliers for live orders, and there's no undo. The scoped one on the General information tab is much smaller and safer.
